CATALOGO TECNICO

TECHNICAL CATALOGUE

Sistema integrato di profili, accessori e guarnizioni a taglio termico con profili aventi sezione di 73.5 mm, idoneo per la realizzazione di porte e finestre, rettangolari, sagomate o curve con o senza fissi laterali e superiori.
I profili in metallo componenti il sistema sono dello spessore di 15/10 mm e sono ottenuti tramite profilatura a freddo di nastri nei vari materiali previsti dal sistema.
Il taglio termico dei profili è realizzato tramite un estruso in poliammide rinforzato con fibra di vetro reso solidale alle parti in metallo esterne da una resina poliuretanica ad alta densità, iniettata ad alta pressione. Il collegamento che si ottiene è continuo, privo di interruzioni e garantisce la massima resistenza torsionale e flettente.
La costruzione dei telai prevede l'unione tra i profili tramite saldatura in continuo delle sezioni in contatto e la successiva ripresa delle superfici in vista, o l'utilizzo di un sistema misto ad assiemaggio meccanico a saldatura interna che non necessita di riprese di finitura.
Il sistema prevede al possibilità di alloggiare **vetri singoli o stratificati** (di sicurezza) a una o più camere.

Sistema porte:
Complanarità delle ante;
Doppia guarnizione di tenuta per elevate caratteristiche prestazionali e acustiche;
Completa dotazione di accessori negli stessi materiali del profilo;
Cerniere a saldare, ad avvitare e a scomparsa per grandi portate;
Maniglie dedicate nei materiali previsti dal sistema;
Paraspifferi inferiore con guarnizione a pinna.

Sistema finestre:
Complanarità delle ante;
Sistema di guarnizioni a giunto aperto per le massime prestazioni di resistenza all'aria, acqua e vento ed elevati valori di resistenza acustica;
Finestra a due ante con nodo centrale da 107 mm senza l'aggiunta di profili per l'inversione di battuta;
Completa dotazione di accessori:
Ferramenta per apertura ad anta ribalta a scomparsa per portate fino a 130 kg e classe RC3 all'effrazione
Ferramenta per apertura a vasistas per portate fino a 100 kg
Maniglie dedicate nei materiali previsti dal sistema.

Thermally insulated integrated system of profiles, accessories and gaskets *with section of 73.5 mm suitable for rectangular, trapezoidal, arched shaped doors and windows with or without fixed side light.*
The metal profiles *that make up the system are 15/10 mm thick and are obtained from the cold-forming of the coils in the various materials available.*
The profile thermal break *is connected by means of a glass-fibre reinforced, extruded polyamide that becomes one with the external metal parts with the use of a high density polyurethane resin, injected at high pressure. The connection is continuous, without interruptions, guaranteeing maximum resilience to torsional and bending stress.*
The assembly of the frames *requires that the profiles be connected by welding together the sections in contact and then that the visible welds must be ground down neatly and finished, or by combining mechanical assembly and internal welding that does not require the retouching of the finish.*
The system permits to use double or triple thermal insulated glazing with ***single or stratified glass*** *(security glass).*

Doors system:
Coplanarity of the doors;
Double sealing gasket for high performance and acoustics;
Complete with accessories in same material as profile;
Hinges to be welded, screwed or concealed for large capacities;
Selection of handles in materials provided for by the system;
Bottom draught excluder with fin gasket.

Windows system:
Coplanarity of the leaves;
System of open joint gaskets for maximum resistance to air, water and wind, as well as high levels of acoustic resistance;
Two-leaved window with 107 mm central section without the addition of profiles for reverting rebate;
All accessories furnished;
Hardware for opening of tilt-and-turn retractable window for capacities up to 130 kg and class RC3 break-in resistance;
Hardware for bottom-hung openings for capacities up to 100 kg;
Handles in the materials provided for by the system.

PRESTAZIONI
Sistema finestre
Trasmittanza termica (UNI EN 10077-2)
-Nodo tipo (acciaio inox) con U_f=2,1 W/m^{2}K
-Finestra tipo (1230x1480 mm con U_g1,0) U_W=1,5 W/m^{2}K
Isolamento acustico (UNI EN 717-1)
-Fino a 47 dB
Resistenza all'aria (UNI EN 12207)
-Classe 4
Resistenza all'acqua (UNI EN 12208)
-Classe 9A
Resistenza al vento (UNI EN 12210)
-Classe C5
Resistenza alla forza di azionamento (UNI EN 13115)
-Classe 1 - < 100 N
Prova carico verticale e torsione statica (UNI EN 13115)
-Classe 4 - 800 N / 350 N
Prova di durata a cicli di apertura (UNI EN 12400)
-Classe 2 - 10.000 cicli
Resistenza della giunzione a taglio temico (EN14024)
-Classe CW / TC2

PERFORMANCES
Windows system
Thermal trasmittance (UNI EN 10077-2)
-Typical section (stainless steel) with U_f=2,1 W/m^{2}K
-Typical window (1230x1480 mm with U_g1,0) U_W=1,5 W/m^{2}K
Acoustic performance (UNI EN 717-1)
-Up to 47 dB
Air permeability (UNI EN 12207)
-Class 4
Watertightness (UNI EN 12208)
-Class 9A
Resistance to wind load (UNI EN 12210)
-Class C5
Operating forces (UNI EN 13115)
-Classe 1 - < 100 N
Mechanical properties (UNI EN 13115)
-Classe 4 - 800 N / 350 N
Resistance to repeated opening and closing (UNI EN 12400)
-Class 2 - 10 000 opening and closing movements
Thermal break resistance of joint (EN12024)
-Class CW / TC2

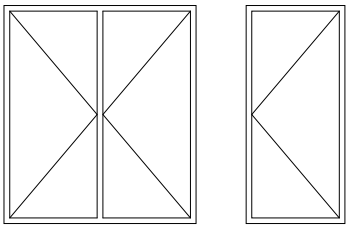
Distinta di taglio e lista componenti | *Cutting list and components list*



Le distinte di taglio e le liste accessori individuate per le diverse tipologie sono state redatte per un serramento tipo.
E' compito dei tecnici specializzati delle ditte produttrici analizzare criticamente tali indicazioni al fine di verificare la compatibilità del tipo e numero di accessori previsti con il serramento oggetto della commessa reale.

The cutting and hardware lists, which have been identified for the different typologies, have been produced for a standard window.
The specialized technicians of the window manufacturers will have to critically analyze such information in order to verify the compatibility of both the type and the number of accessories provided with the window object of the real order.

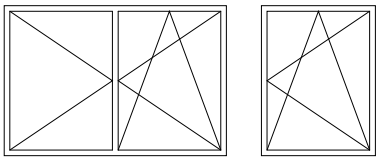
Distinta di taglio e lista componenti | *Cutting list and components list*



Le distinte di taglio e le liste accessori individuate per le diverse tipologie sono state redatte per un serramento tipo.
E' compito dei tecnici specializzati delle ditte produttrici analizzare criticamente tali indicazioni al fine di verificare la compatibilità del tipo e numero di accessori previsti con il serramento oggetto della commessa reale.

The cutting and hardware lists, which have been identified for the different typologies, have been produced for a standard window.
The specialized technicians of the window manufacturers will have to critically analyze such information in order to verify the compatibility of both the type and the number of accessories provided with the window object of the real order.

La tabella seguente va attentamente letta prima del taglio dei profili | *The following table should be carefully read before the profiles cutting*

In essa è riportata la misura da considerare nella distanza tra telaio anta e telaio fisso nella produzione di finestre in funzione della tipologia, del tipo di cerniera e della larghezza delle ante da produrre.

It shows the measurement to follow between the leaf and the fixed frame in the production of windows depending on the typology, the hinge type and the width of the leaf to be produced.

			larghezza anta (cava ferramenta in mm) *leaf width (hardware slot in mm)*				
			280 360	361 480	481 600	601 800	> 800

Ottone
Utilizzare le squadrette di allineamento, sigillare tutte le superfici di contatto tra i profili che non vanno saldate. Saldare a TIG a punti le zone indicate.

Brass
Use corner brackets, seal all surfaces in touch with profiles that are not to be seam-welded. Spot weld (TIG) the marked areas.

Acciaio zincato - Acciaio Corten - Acciaio inox
Saldare in continuo le superfici di contatto.

Galvanised steel - Cor-ten steel - Stainless steel
Seam-weld all contact surfaces.

1) Asportare il poliammide.
1) Remove the polyamide.

2) Tagliare la guarnizione GE1704 a 50 mm. dal filo esterno del polliamide.
2) Cut the gasket GE1702 at 50 mm from the end thread of polyamide.

3) Asportare la la parte dell'estruso GU1702 che interferisce con il fondino A.
3) Remove the part of the extrudate GU17021 that interferes with the rubber ending cap A.

4) Posizionare il fondino di gomma ed incollarlo alla guarnizione GE1701 a mezzo di colla ciano-acrilica.
4) Position the rubber ending cap and stick it to the gasket GE1701 with cyano-acrylic glue

1) Eseguire i fori come da disegno .

2) Posizionare lo scarico acqua e sigillare fissare con viti in dotazione M3x12.

3) Posizionare il supporto della guarnizione di giunto GU1702 e fissarlo con vite TC 3.5x13 (non fornita).

4) Sigillare la guarnizione di giunto GE1701 con il supporto GU1702 per tutta lunghezza e per 200 mm in altezza sul telaio.

5) Posizionare la guarnizione di giunto centrale GE1701 e gli angoli vulcanizzati AC1716, incollare gli angoli alla guarnizione a mezzo di colla ciano-acrilica.

1) Drill the holes according to drawing .

2) Install the water drip accessory, seal and secure with the supplied M3x12 screw.

3) Position the support of the weather strip GU1702 and anchor it with the double-sided adhesive tape provided and screws TC 3.5x13 *(not provided).*

4) Seal the weather strip GE1701 with the support GU1702 for the whole length and for 200 mm vertically on the frame.

5) Install the central weather strip GE1701 and the vulcanised corners AC1716, glue the corners to the weather strip using cyanoacrylate glue.

Note / *Note*

- La larghezza degli spessori è almeno pari o maggiore (+2 mm) dello spessore del vetro installato.
- La posizione degli spessori deve essere garantita dall'utilizzo di materiale adeguato che ne eviti lo spostamento.

- The shims' width is the same or greater (+2 mm) than the thickness of the glass installed.
- The position of the shims has to be ensured by using appropriate material that avoids creeping.

* vite TSP 4.2 x 16 mm non inclusa - *screw TSP 4.2 x 16 mm not included*

** spessori vetro non inclusi - *glass thickness not included*

Generalità
I sistemi progettati e sviluppati dalla Secco Sistemi sono idonei per la fabbricazione di un'ampia gamma serramenti, vetrate e facciate in metallo. I sistemi sono rivolti ad aziende esperte e professionali nel campo della lavorazione dei metalli e della costruzione di serramenti e facciate, che sono a conoscenza delle normative di riferimento, delle direttive e delle specifiche tecniche del fornitore del sistema, nonché delle fondamentali regole dell'arte per la produzione e installazione di questi manufatti. Tutta la documentazione tecnica fornita costituisce un riferimento per i tecnici qualificati delle aziende al fine di indicare le modalità per la costruzione dei prodotti. In ogni caso i tecnici qualificati devono analizzare criticamente le indicazioni riportate per verificarne la loro adeguatezza per ogni singola commessa in relazione ai carichi, agli stress previsti e alle condizioni di messa in opera, essendo impossibile riportare in questa documentazione tutte le varianti riscontrabili nei progetti reali.

Tolleranze
EBE 75 prevede l'accoppiamento tra i telai esterni e le ante apribili con distanza di 12 mm su porte e 15 mm su finestre. Per garantire il corretto funzionamento degli accessori e delle guarnizioni le lavorazioni devono essere eseguite con particolare attenzione e precisione: si consiglia di mantenere la tolleranza per la dimensione degli elementi apribili compresa tra +0/-2 mm e la tolleranza per il sormonto degli stessi compresa tra +0/+1 mm.

Taglio/Lavorazioni
I profili EBE 75 in acciaio zincato, acciaio inox e corten possono essere tagliati con le normali troncatrici a disco utilizzate per i tubolari in acciaio, mentre per il taglio dei profili in ottone possono anche essere utilizzate troncatrici per le serie di alluminio. Vista la loro particolare dimensione e forma si consiglia di utilizzare le ganasce di taglio previste dal sistema per assicurare una perfetta stabilità dei profili durante il taglio. La verifica del taglio, sia per la sezione inclinata a 45° che per la sezione verticale a 90°, dovrebbe garantire una tolleranza compresa tra -1°/+1°. Tutte le lavorazioni devono essere eseguite con il rispetto della seguente nota tecnica ed eventuali modifiche concordate con l'ufficio tecnico Secco Sistemi.

Saldatura
I profili EBE 75 possono essere saldati con i tradizionali sistemi di saldatura (MIG/MAG, TIG), con un idoneo sistema di lubrificazione/refrigerazione e utilizzando le istruzioni presenti nella presente nota tecnica ed evitando di saldare in prossimità della giunzione a taglio termico. L'eventuale riscaldamento del poliuretano libera sostanze gassose a base di aldeidi e CO: per tale ragione si consiglia di saldare con gli appositi DPI previsti e in zone con sufficiente areazione e in presenza di sistema per l'evacuazione dei fumi. I profili in corten devono essere saldati con apposito filo in corten mentre per i profili in ottone si può utilizzare un filo CuSi3. Si raccomanda di saldare in profondità e senza lasciare fori e porosità le aree in contatto, di lisciare e pulire adeguatamente la superficie saldata per garantire una corretta resistenza strutturale all'angolo e permettere una successiva verniciatura senza imperfezioni estetiche visibili (pori e ondulazioni).

Verniciatura/Brunitura
I profili EBE 75 sono stati progettati per essere verniciati a polveri in forni con temperature di 180°C per 25 minuti. La zona a taglio termico in poliuretano non è in grado di accogliere con sufficiente adesione le polveri poliesteri e perciò si consiglia di ricoprire tali zone, nelle sole parti destinate ad essere in vista, con apposite pellicole adesive idonee al passaggio in forno.
I telai prima della verniciatura o della brunitura devono essere forati come da istruzioni presenti in questa nota tecnica per permettere la fuoriuscita dei liquidi utilizzati durante il pretrattamento delle superfici. All'uscita del forno di polimerizzazione della polvere i telai vanno rimossi accuratamente e adagiati in posizione piana sino al loro completo raffreddamento.
Si consiglia di seguire il ciclo di pretrattamenti e verniciatura presente nella documentazione Secco Sistemi.

Vetrazione
Il sistema di fissaggio del vetro prevede l'utilizzo di fermavetri agganciati all'interno tramite clips o boccole interne e mandati in pressione con l'incastro dell'apposita guarnizione interna; all'esterno è previsto l'utilizzo di una guarnizione perimetrale continua giuntata e sigillata in un angolo superiore o di una guarnizione butilica di fondo giunto e un cordolo di silicone applicato secondo le prescrizioni tecniche del fornitore del prodotto. Per il corretto funzionamento del sistema si suggerisce di verificare la perfetta compressione delle guarnizioni interne del fermavetro.

Installazione
La corretta installazione deve garantire il mantenimento delle performance dichiarate nella marcatura CE e testate in laboratorio. Si consiglia di progettare un corretto numero di fissaggi in relazione al tipo di controtelaio/muratura esistente e alle dimensioni degli elementi da installare. Al termine dell'istallazione si verifichi il corretto funzionamento del serramento (facilità di apertura/chiusura, stabilità dell'anta aperta a riposo, etc.), il rispetto delle fughe e del sormonto tra ante apribili e telai fissi, il regolare posizionamento delle guarnizioni e delle sigillature, il drenaggio del giunto aperto e la mancanza di difetti estetici sulle superfici del telai e del vetro.

General information
The systems designed and developed by Secco Sistemi are suitable for the manufacturing of a wide range of doors, windows and shutters, as well as faces or facades in metal. The systems are designed for professional and expert companies in the metal-working sector and that of construction of doors, windows, shutters and facades. These companies are well aware of the specific regulations and the directions and technical specifications of the system supplier, and also the fundamental rules of the art of manufacturing and installing these products. All the technical documentation provided furnishes a source of reference for the qualified technicians of the companies, giving indications as to how the products should be constructed. These qualified experts must critically analyse the indications to verify their adequacy for each single order in terms of load, stress and conditions of installation, particularly as this documentation cannot provide for all the different variations that may be found in projects.

Tolerance
EBE 75 is made by coupling external frames with the opening leaves with a distance of 12 mm on doors and 15 mm on windows. To ensure the correct functioning of hardware and gaskets, tooling must be performed with great care and precision. It is advised to keep the tolerance between +0/-1 mm for opening elements and between +0/+0.5mm for their overlapping area.

Cut / Processing
EBE 75 profiles in galvanized steel, stainless steel and corten steel can be cut with normal saws, like those used for steel pipes. EBE 75 profiles in brass can be cut with saws used for aluminium. Given their dimension and size, it is recommended to use the cutting jaws advised to ensure perfect stability during the cutting procedure. In order to verify the correctness of the cut, the tolerance of both the 45° and the 90° sections must be between -1°/+1°. All Tooling must be performed in line with this technical note and any variations agreed with Secco Sistemi's Technical Department.

Welding
EBE 75 profiles can be welded with the traditional systems (MIG/MAG, TIG), with an appropriate lubricating/cooling system and according to the instructions as per this technical note. Avoid welding near the thermal break joint. Heating any polyurethane items releases gaseous substances containing aldehydes and CO. For this reason it is recommended to weld with the special Personal Protective Equipment suggested and in areas with sufficient ventilation and fume-disposing systems. The corten profiles must be welded with special corten wire, while for profiles in brass a CuSi3 wire can be used. It is recommended to weld in depth, to avoid leaving any holes or porosity on the surfaces and to smooth and clean the welded surface thoroughly. This is to guarantee a proper structural resistance at the corner and to allow for later painting without any visible imperfections (pores and ripples).

Painting/Burnishing
EBE 75 profiles have been designed to be painted with the powder coating technique in industrial ovens at temperatures of 180°C for 25 minutes. The thermal break area is not designed to absorb polyester powders and therefore it's advised to cover the visible areas with appropriate industrial-oven-resistant adhesive films (SA1024 and SA1033). Holes must be drilled in the frames (as per instructions in these technical specifications) before painting or burnishing in order to allow drainage of any liquid used as a pre-treatment of the surfaces. Once out of the oven, the frames must be accurately removed and laid in a horizontal position until complete cooled.
It is advised to follow pre-treatment and painting cycles as outlined in the Secco Sistemi documentation.

Glass application
Glass needs to be secured internally and externally. Internally, glazing beads must be used together with clips or bushings and then secured by pressure with the appropriate gasket; externally a continuous perimetrical gasket should be applied, jointed and sealed in a top corner or a butyl seal and a thread of silicone that must be applied according to the product supplier's technical specifications. In order to ensure the correct functioning of the system, it is recommended to verify the proper pressurization of the internal glazing bead gaskets.

Installation
Proper installation must guarantee that the performances declared in the EC marking and verified in the lab will remain constant. It is advised to arrange a correct series of set ups with reference to the existing type of subframe/brickwork and to the dimensions of the elements to install. Once installation is completed, the proper functioning of the window/door (easiness of opening/closing, stability of the open leaf, etc.), should be tested as well as the correctness of joints and overlapping areas between opening leaves and fixed frames, the proper positioning of gaskets and seals, the drainage of frames with weep system and the absence of any aesthetic defects on the frame and glass surfaces.

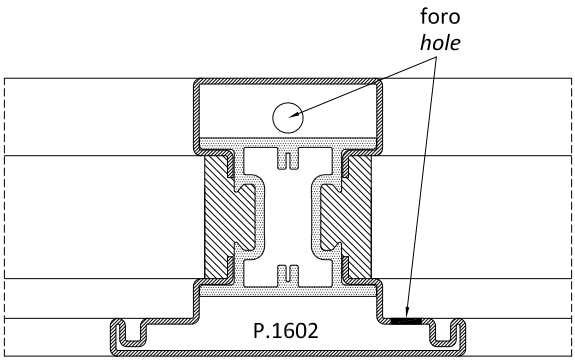
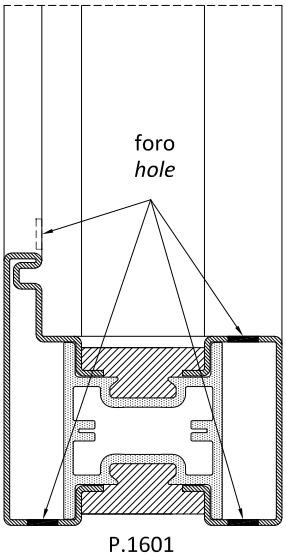
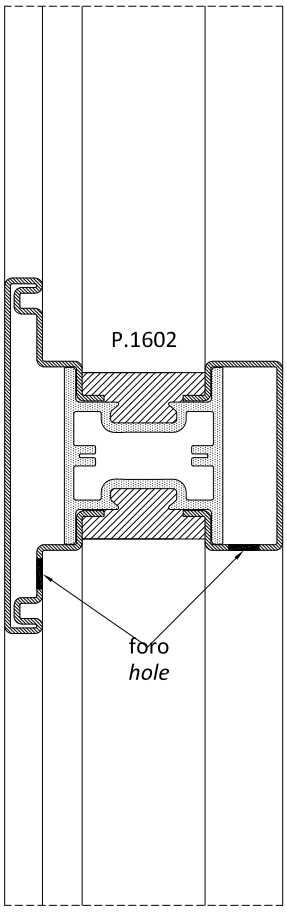
FORATURA MONTANTI
DRILLING MULLION





FORATURA TRAVERSI
DRILLING TRANSOM



Troncatrice

caratteristiche minime della macchina

- Potenza: 1.8 – 2.5 kW;
- Possibilità di taglio a 45° nei due sensi e a 90°;
- Velocità di taglio ideali: 15-30 giri/min per acciaio inox;
  60-90 giri/min per acciaio zincato e corten,
  90 giri/min o superiori per bronzo (OT/67);
- Capacita di taglio: 150 x 80 mm a 90°;
  100 mm taglio a 45°.

caratteristiche della lama

- Lama da 350 mm con spessore 2.5 mm;
- N° denti: - 300 per tagli a 45°;
  - 350 per tagli a 90°;
- Materiale: HSS (verificare materiali di commercio con finiture che migliorano la durata delle lame).

NB: è possibile tagliare la lega OT/67 con le stesse macchine dell'alluminio.

Pantografo

caratteristiche minime della macchina

- Mandrino con velocità regolabile 2000-11000 giri/min (per un corretta lavorazione su acciaio inox è necessario operare a n° ridotto di giri < 4000);
- Struttura in ghisa adatta al taglio acciaio;
- Testata pesante per limitare le vibrazioni;
- Chiusura del profilo da lavorare con morse.

caratteristiche minime delle frese

- Materiale: HSS (verificare materiali di commercio con finiture che migliorano la durata delle frese);
- Frese a 4 denti;
- Frese con diametro 5 mm per le lavorazioni di scasso.

Forature

montaggio componenti di chiusura e movimentazione sui profilati in acciaio inox

- Forare con punte da trapano HSS del diametro indicato sulla corrispondente tavola tecnica;
- Maschiare il foro con vite autofilettante zincocromata avente diametro corrispondente alla vite inox fornita nel kit con l'articolo da montare;
- Posizionamento e fissaggio definitivo dell'articolo con le viti inox in dotazione.

fresatura di cave e asole sui profili inox

- Adoperare macchine (pantografi o fresatrici) adeguate alle lavorazioni dell'acciaio;
- Regolazione del numero di giri max (3000 giri/1');
- Impiego di frese di diametro massimo di 8mm a 4 pale in acciaio HSS;
- Abbondare con la lubrificazione, concentrata sull'utensile;
- Ridurre l'avanzamento fino ad accertare un taglio il più regolare possibile;
- È normale un'usura accelerata dell'utensile.

Cutter

Minimum requirements for the use of the machine

- Power: 1.8 – 2.5 kW;
- Possibility of cutting at 45° in both directions and at 90°;
- Ideal cutting speed: 15-30 rmp for stainless steel;
  60-90 rmp for galvanised and corten steel;
  90 rmp or higher for bronze (OT/67);
- Cutting capability: 150 x 80 mm at 90°;
  100 mm cut at 45°.

Blade specifications

- 350 mm blade with a 2.5 mm thickness;
- Number of teeth: 300 for 45° cut;
  350 for 90° cut;
- Material: HSS (please verify availability of longer lasting material on the market).

Note: OT/67 alloy can be cut with machines made for aluminum.

Phantograph

Minimum requirements for the use of the machine

- Mandrel with a 2000-11000 rmp adjustable speed (for a proper stainless steel processing a slower speed is required i.e.<4000 rpm);
- Machine should be made of cast iron suitable for steel cutting;
- Heavy head in order to limit vibrations;
- Secure the profile to be processed in jaws.

Minimum requirements for the use of a milling machine

- Material: HSS (please verify availability of longer lasting material on the market);
- Use a 4-tooth milling machine;
- Use a milling machine with a 5-mm diameter for groove processing.

Drilling

How to mount closing and moving components on a stainless steel profile

- Use a HSS drill. The diameter of the drill is indicated in the technical note;
- Thread the hole with self-threading zinc-plated screws with the same diameter as the stainless steel screw provided with the kit;
- Position and secure the item with the stainless steel screws provided.

Milling slots and loops in the profiles

- Use machines designed for steel processing (pantographs or milling machines);
- Max rpm setting (3000 rpm);
- Use milling machines with a diameter no bigger than 8 mm and with 4 HSS steel blades;
- Exceed with lubrication, mainly on the machine;
- Processed slowly until the milling is as clean as possible;
- Expect a fast wearing of the machine.

MATERIALI

ACCIAIO INOX
Materiale
Profilati ricavati da nastro di lamiera di acciaio inox laminato a freddo pre-trattato industrialmente per garantire la massima qualità e uniformità.
Caratteristiche fisiche
AISI 316L Marino (X2 CrNiMo 17-12-2)
Norme di riferimento
EN 10088-2; EU 114
Trattamenti superficiali
Finitura satinata: ottenuta su nastro AISI 304 con finitura superficiale 2B con successiva satinatura con abrasivi a grana 240-280.
Finitura lucida: ottenuta su nastro AISI 316L (marino) con finitura superficiale 2R, riflettività 53% e successiva lucidatura a specchio.
Finitura Scotch Brite: ottenuta su nastro AISI 316L (marino) con finitura superficiale 2B con successiva spazzolatura Scoth Brite.

ACCIAIO COR-TEN
Materiale
Profilati ottenuti da nastro in acciaio altoresistenziale, autopassivante (che un tempo veniva commercializzato con il nome Cor-Ten) tale da formare, se esposto all'aria, uno strato di ossido uniforme e stabile che, ricoprendo la lamiera, ne arresta la corrosione atmosferica.
Caratteristiche fisiche
Fe 510 X (C max % 0,12: Si % 0,25-0,75: Mn % 0,20-0,50: P % 0,07-0,15: Cu % 0,25-0,55: Cr % 0,30-1,25: Ni max % 0,65)
Norme di riferimento
EN 10149
Trattamenti superficiali
Dopo la profilatura il materiale viene immerso in speciali bagni ossidanti tali da accelerare la formazione dello strato protettivo. Raggiunta la tonalità desiderata della superficie si procede ad una ceratura di stabilizzazione del materiale.

ACCIAIO ZINCATO VERNICIATO
Materiale
Profilati ottenuti da nastro in lamiera di acciaio zincato a caldo sistema Sendzimir finitura skinpassata
Caratteristiche fisiche
FeP02 GZ 200 (copertura di zinco pari a 200gr/m^2 per faccia)
Norme di riferimento
UNI EN 10142/3/7; EURONORM 143
Trattamenti superficiali per la verniciatura
La preparazione del supporto zincato si effettua tramite i processi di sgrassaggio, decapaggio e lavaggio in acqua. Segue l'applicazione di uno strato di zinco per fosfatazione seguito da lavaggi in acqua demineralizzata. Infine applicazione della mano a finire con polveri poliestere cotte in forno a 180 °C per 25 minuti.

LEGA DI RAME OT67
Materiale
Profilati ottenuti da nastro di Lega di Rame OT67 laminato a freddo rincrudito allo stato grezzo.
Caratteristiche fisiche
Cu Zn 33 CW 506L (OT 67, 67% rame)
Norme di riferimento
EN 1652:1999
Trattamenti superficiali
Finitura brunita: dopo la profilatura viene eseguita una ricottura di distensione, quindi la pulitura meccanica con abrasivo e la successiva brunitura per immersione con liquido brunitore; il profilo viene poi lavato e asciugato ed infine protetto mediante trattamento con olio di vaselina.
Finitura lucida: dopo la profilatura viene eseguita una ricottura di distensione e successivamente la lucidatura a specchio.

MATERIALS

STAINLESS STEEL
Materials
Sections processed out of the cold-rolled coils, industrially pre-treated for utmost quality and uniformity.
Physical features
AISI 316L Marino (X2 CrNiMo 17-12-2)
Norms of reference
EN 10088-2; EU 114
Surface treatment
Satined: obtained on AISI 304 coil 2B pre-finish with post-treatment by means of abrasive 240-280 in grain size.
Polished: obtained on AISI 316L (marine) coil pre-finish with 2R surface finish, 53% reflectivity, and mirror post-polish.
Scotch Brite: obtained on AISI 316L (marine) coil 2B pre-finish with Scotch-Brite post-scrubbing.

CORTEN STEEL
Materials
Sections processed out of highly resistant self-oxidising steel coils – once traded under the name Cor-Ten. If exposed to the open air, it produces a uniform protective layer that reduces weather corrosion.
Physical features
Fe 510 X (C max % 0,12: Si % 0,25-0,75: Mn % 0,20-0,50: P % 0,07-0,15: Cu % 0,25-0,55: Cr % 0,30-1,25: Ni max % 0,65)
Norms of reference
EN 10149
Surface treatment
After forming, sections are plunged into a special oxydising bath to catalyze formation of the protective coating. Once the desired tone obtained, sections are stabilized by a wax coating.

GALVANIZED AND PAINTED STEEL
Materials
Sections processed out of hot galvanized steel coils, band "Sendzimir, skinpassed finishing.
Physical features
FeP02 GZ 200 (*with zinc coating of 200 gr/sq x m on both faces*)
Norms of reference
UNI EN 10142/3/7; EURONORM 143
Pre-painted surface treatment
The preparation of a galvanised surface in made through several processes: degreasing, pickling an washing. A coating of zinc is then applied through a phosphatising process followed by rinses in demineralised water. A final coat in then applied with polyester powders baked at 180 °C for 25 minutes.

COPPER ALLOY OT67
Materials
Sections processed out of copper alloy coils, industrially cold-rolled.
Physical features
Cu Zn 33 CW 506L (OT 67, 67% *copper* e 33% *zinc*)
Norms of reference
EN 1652:1999
Surface treatment
Burnished finish: after forming, the product is submitted to stress relieving, then to mechanical cleaning with abrasive products and ultimately to burnishing by plunging into a burnishing solution. It is then washed and dried and protected with a vaseline coating.
Glossy finish: after forming, the product is submitted to stress relieveing and then mirror-like polished.
