Balances

Balances between architecture and empty space, fluid connections between inside and outside, Secco recounts these fascinating themes through the program of pivot windows. Element in constant balance, it transcends the need for closure, plays with space, redefining the correlation between window and frame, between lightness and dimensions. The pivot window fascinates, amazes, the light that passes through in the movement, changes its direction and reflection. Secco Sistemi offers original pivot windows for architecture, exceptional dimensions, minimal profiles made with precious materials and performance at the highest levels are the main features.

vertical pivot

absolute balance in the movement of vertical pivot. The glass, supported in the opening by minimal profiles, rotates moving the internal space, modifying the connection linking external and internal, promoting the passage.

credit: Andrea Piovesan

horizontal pivot

as an eyelid rises with naturalness and opens the view, so the horizontal pivot, thanks to a game of balances between ascent and descent, moves and effortlessly rotates very heavy weights (up to 250 kg), projecting the view towards the outside.

credit: Andrea Piovesan

equilibri project

large dimensions, minimal profiles, Equilibri project by Secco Sistemi offers elegant and scenographic pivots. The visible sections of only 62mm are constant throughout the perimeter of the window.

Handles, concealed hinges, glazing beads are all available with the same precious metals of Secco profiles; brass, corten, stainless steel, galvanized steel.

pivots

Equilibri project pivot are made with the OS2 75 system, that has been awarded with Compasso d'Oro, the oldest and most renowned worldwide recognition for design. OS2 75 offers a range of large pivot openings, without giving up to reduced and constant sections, high performance and precious materials such as brass, corten, stainless steel, galvanized steel.

available finishes

stainless steel

polished 316L stainless steel

scotch brite 316SB stainless steel

satin-finished 304 stainless steel

burnished 316SB stainless steel

galvanised steel

painted galvanised steel

corten steel

oxidised corten steel

waxed oxidised corten steel

brass

patinated OT67 brass

satin-finished OT67 brass

hinges

Hinge is the fundamental device that mediates between the window frame and sash and makes the pivot movement possible.

Secco proposes this concealed technological device, in the same frame finishes - galvanized steel, stainless steel, corten and brass - with certified long-lasting characteristics and high payload up to 350 kg.

glazing beads

glazing beads are design elements made with the same materials and finishes as the window frame. Their shape and their size, compared to the section of the profile, are variants that can have different combinations and can change the perception of the space occupied by the window. The fastening of the glazing bead on the leaf is always concealed and, due to the continuity of the lines in the prospectus, the profiles can be welded together at the corners.

handles

elegant and discreet accessory, with slight and linear profiles, the Secco handles integrate perfectly with the frame and are produced in the same precious materials and finishes of the profiles (brass, corten, stainless steel) and they can be T, or L-shaped.

Secco Sistemi is an Italian brand that symbolizes innovation and design awarded with "Compasso d'Oro" prize. It has been contributing to the evolution of window and door engineering for 70 years, inventing systems and profiles that have become benchmarks for the industry of this sector and continuing to improve them and interpret the latest projects and trends of contemporary architecture. So far 340 profiles have been developed in 4 selected metals - galvanized steel, stainless steel, corten steel and brass - and in 9 different finishes with an annual production of 2.8 million linear meters of profiled bars for 280,000 doors and windows.
